## 99% of cervical cancer cases in the UK are preventable

Sources: Cancer Research UK

→ **New or persistent symptoms?**

→ **Worried or unsure?**

→ **Speak to your GP**

These symptoms don't always mean cancer, but should be checked.

01 Unusual vaginal bleeding

02 Changes to vaginal discharge

03 Pain or discomfort during sex

04 Unexplained pain in lower back or pelvis

**Have you been invited for cervical screening?**

**Book your appointment.** Cervical screening is for women and anyone with a cervix aged 25-64, even if you're symptom-free.

→ **Get screened**

→ **Know the signs**

→ **Act early**
